

## LLMs Limitations

1. **Unable to embed text in images:**

Create an image representing AI with text "What is an LLM?"

It might not create the image with provided text accurately.

2. **Unable to get real-time information access accurately:**

The US government has started a war against India today. What do you think about this?

It might say it doesn't have access to the recent information.

3. **Remove biasness:**

There's a new committee forming in my college that will look after the sports. There are going to be the five members of that committee with one being the head of that. What do you think could be the ratio of men and women in the same?

This is improving but not all models have this
